

Hospital to Post-Acute Care Transfer Form for COVID-19

Updated March 24, 2020

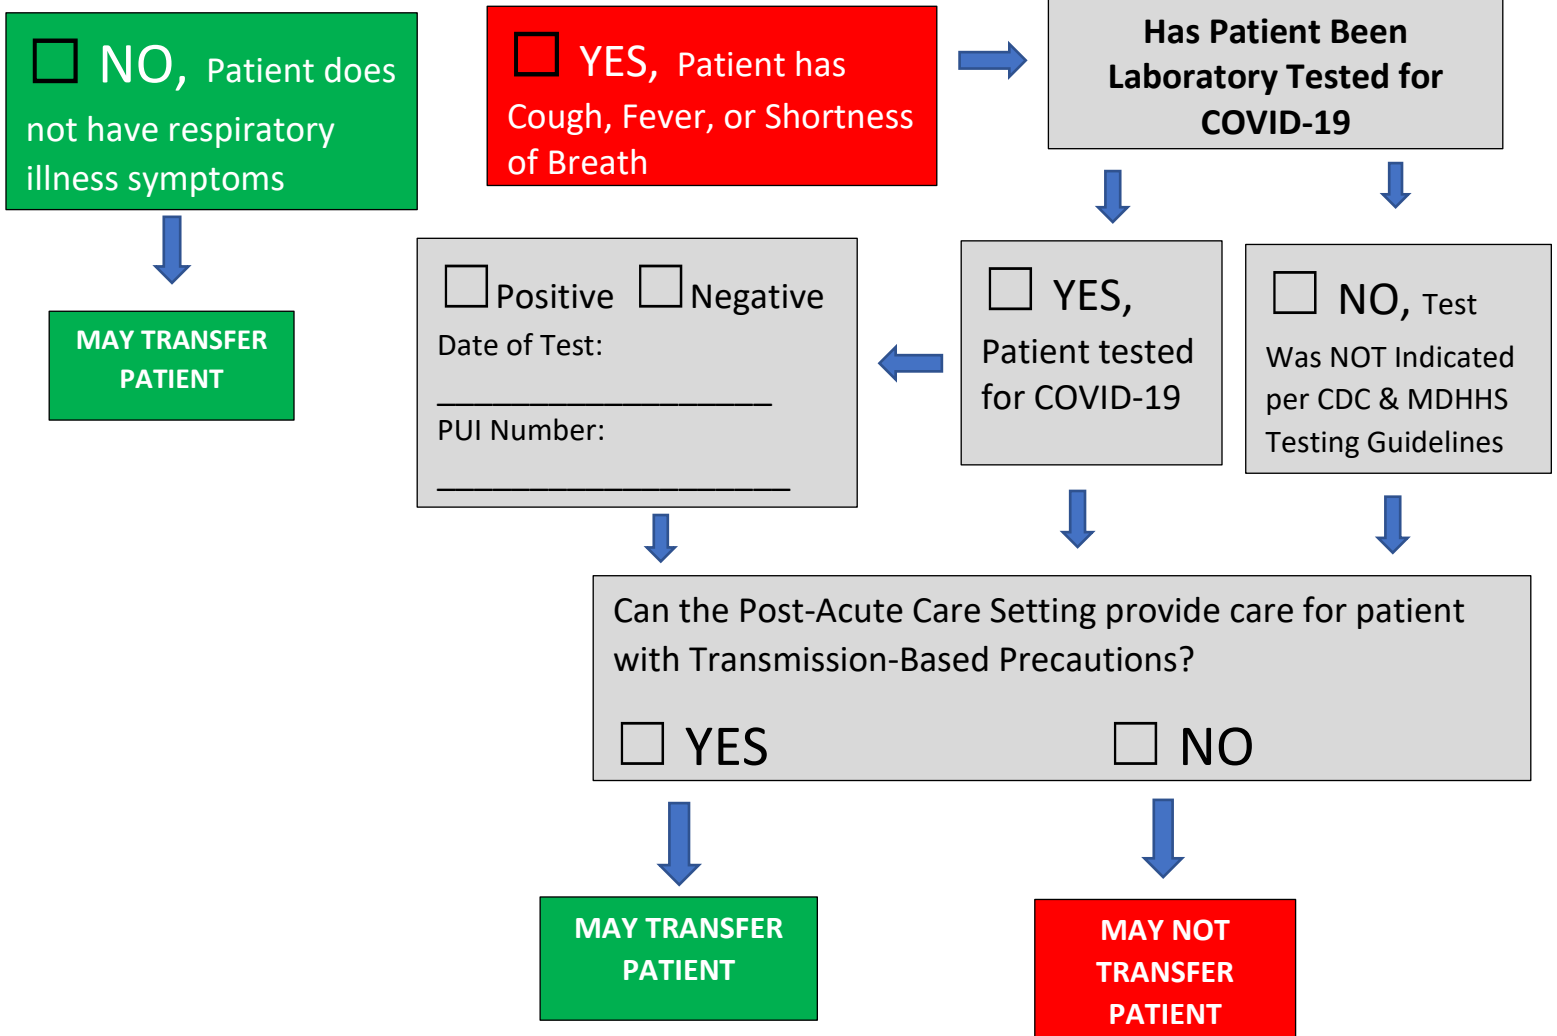

This tool is to facilitate communication between providers during the transition from the hospital to the post-acute care setting. Check the box for each criteria appropriate to patient's status.

Hospitalized patients should be assessed for respiratory illnesses and COVID-19 prior to transfer to a post-acute care facility. Residents with COVID-19 that require hospitalization can and should be discharged back to the facility of residence once they are clinically stable regardless of whether COVID-19 testing is still positive or negative. Continued hospitalization until residents test negative will overwhelm the healthcare system and should be avoided. Please review CDC [Interim Guidance for Discontinuation of Transmission-Based Precautions and Disposition of Hospitalized Patients with COVID-19](#).

Patient Name: _____

Transferring Facility: _____ Accepting Facility: _____

Does the Patient Have Respiratory Illness Symptoms

For further information: please refer to [CDC Discontinuation of Transmission-Based Precautions and Disposition of Patients with COVID-19 in Healthcare Settings \(Interim Guidance\)](#)
